Distribute

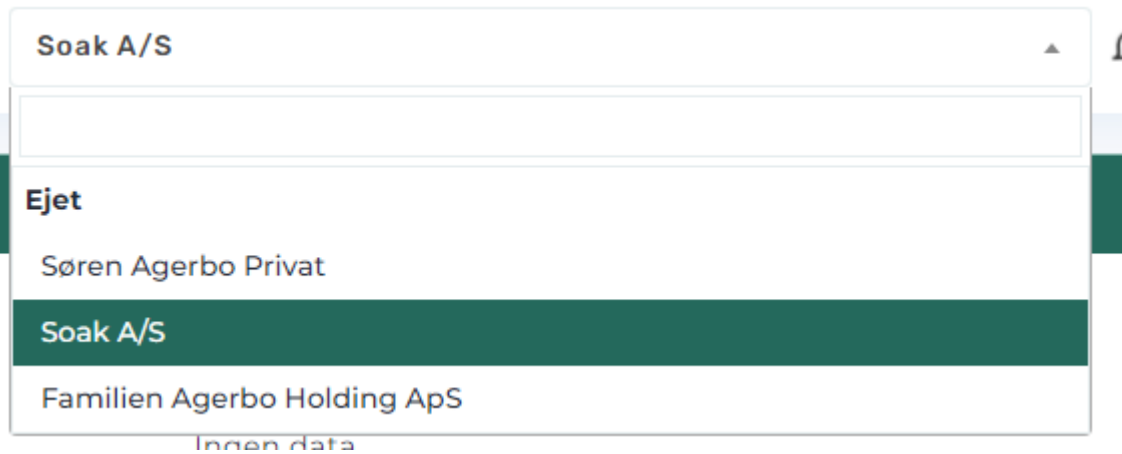

We have been using e-signatures ourselves for many years, but we have always been frustrated by a lack of functionality from others and high prices.

We have tried to pay over 50 kroner per. signing, as we have not used all the signings that were in the package we were going to buy.

The benefits we see of ubidogy are:

- 1) **Multiple companies.** We think it is unreasonable that you have to make more subscriptions if you want to have more companies. With us, you can create all the companies you want on a subscription, and then you can save documents per. subscription.

As can be seen from the picture, I have 3 "companies" and I can save documents under these as I wish.

- 2) **Save manually signed documents.** Some of our competitors only allow you to save documents that you have signed. This is not reasonable, which is why you can upload old documents that have been manually signed, for example.
- 3) **Save documents without a signature.** You can save documents without a signature, so you have everything legally gathered in one place.

- 4) **Pricing model.** We have a consumption-related price settlement, so you do not pay for packages you do not use. YOU PAY FOR WHAT YOU USE.
- 5) **Backup.** With the click of a button, you can back up all your documents. Then you are not tied to us and you still have your documents even if you want to use other software.
- 6) **Binding.** There is no binding... You pay according to consumption of space and signatures.
- 7) **AND MANY MORE THINGS.** It's just delicious software
